AB A crystal comprising Vibrio harveyi protein LuxP is obtained, and a binding site for autoinducer-2 (AI-2) identified. X-ray crystallog. data for LuxP and a LuxP-AI-2 complex is determined and refined to 1.5 .ANG. resolution and used in a drug discovery method. Pharmaceutical compns. comprising ligands identified by such drug discovery methods are used to treat bacterial infections.

AB Bacteria lacking the ability to secrete autoinducer-2 may nonetheless be regulated by contacting the bacteria with an amount of an autoinducer-2 effector that is sufficient to regulate the bacterium. Pseudomonas aeruginosa, a bacterium that colonizes the lungs of cystic fibrosis patients with often devastating effects on health, is a preferred target for regulation.

AB This invention provides methods and compns. for using nitric oxide in a photoradiation pathogen inactivation process for whole blood and blood components to improve pathogen kill and to improve preservation of the quality of the blood components. This invention provides methods for using nitric oxide in combination with oxygen, photosensitizers, quencher and/or glycolysis inhibitor, and compns. comprising blood components decontaminated by these methods. Nitric oxide is provided using nitric oxide gas, or nitric oxide generators such as L-arginine, and/or N-acetylcysteine. This invention also provides compns. suitable for photoradiation pathogen inactivation that include fluid comprising a blood component, a photosensitizer, and dissolved nitric oxide. This invention provides decontamination systems useful for performing the methods of this invention and methods for making the decontamination systems. This invention also provides methods for decontaminating fluids and methods for increasing the storage life and quality of photochem. decontaminated platelets. Pathogen eradication was performed in a 3-L Sengewald bag on 300 mL plasma (90% carry-over) that was inoculated with E. coli. The bag also contained 150 mL of 500 ppm nitric oxide gas in a nitrogen balance, delivered through a sterile barrier filter, and 50 .mu.M riboflavin. UV photoradiation of 320 nm wavelength delivered 6 J/cm2 of energy, at about 30.degree.. The results of pathogen inactivation immediately after treatment were compared to other exptl. results by using 5 and 7 J/cm2 UV irradiation energy, with illumination using similar conditions of VHO light bulbs with a ballast, but with no NO and using only 278 mL fluid. With E. coli, improvement of bacterial inactivation was seen using 500 ppm NO atmospheric during illumination at 6 J/cm2, with both 5 and 7 J/cm2 and with both VHO and T8 lights.

AB The invention provides protein and cDNA sequences for novel human and rat and mouse orphan SNORF25 receptor. The invention also relates to constructing SNORF25 gene expression vector to produce recombinant protein using various eukaryotic cell lines. Methods for and results from SNORF25 functional studies also provided. The increased cAMP response of SNORF25-transfected cells in response to trans retinoic acid (ATRA) and phospholipids (like PAF C18 or C16, and lyso-PAF C18 or C16) are detected. The stimulation of CFTR by ATRA in oocyte expressing SNORF25 is also detected. Also disclosed are antibodies directed to mammalian SNORF25 receptors, probes and antisense for diagnosis and therapy of SNORF25 related abnormality, transgenic nonhuman animals, methods of treating related abnormalities, as well as methods of determining binding of compds. to mammalian SNORF25 receptors, methods of identifying agonists and antagonists of SNORF25 receptors, and agonists and antagonists so identified.

AB This invention provides isolated nucleic acids encoding mammalian galanin receptors, isolated galanin receptor proteins, vectors comprising isolated nucleic acid encoding a mammalian galanin receptor, cells comprising such vectors, antibodies directed to a mammalian galanin receptor, nucleic acid probes useful for detecting nucleic acid encoding a mammalian galanin receptor, antisense oligonucleotides complementary to unique sequences of nucleic acid encoding a mammalian galanin receptor, nonhuman transgenic animals which express DNA encoding a normal or a mutant mammalian galanin receptor, as well as methods of determining binding of compds. to mammalian galanin receptors. A galanin receptor was isolated from a rat hypothalamic cDNA library and characterized in heterologous expression systems by galanin binding assays and receptor signaling assays. The pharmacol. properties identified a new receptor subtype named GALR2. A human homolog the the rat GALR2 receptor was also cloned. The invention claims GALR2 receptor subtype-selective agonists and antagonists as therapeutic agents for eating disorders, pain and Alzheimer's disease.

ST cDNA sequence human rat galanin receptor GALR2; mammalian galanin receptor GALR2 agonist antagonist appetite pain Alzheimers

IT Animal cell line
(293, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(3T3, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(CHO, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(COS-7, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Second messenger system
Signal transduction, biological
(GALR2 receptor signaling; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Ligands
RL: BUU (Biological use, unclassified); THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(GALR2 receptor-binding; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Plasmid vectors
(K985, K1045, B029, and B039; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(LMTK-, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(SF9, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Animal cell line
(Sf21, recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Neuropeptide Y receptors
RL: THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(Y5, antagonists; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Drugs
(appetite stimulants; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Appetite
(bulimia; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Chemistry
(chemical compds., GALR2 receptor agonists and antagonists; nucleic acids

encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Genetic element
RL: BUU (Biological use, unclassified); THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(cis regulatory element, tissue specific; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Molecular association
(competitive binding to GALR2 receptor; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Oligonucleotides
RL: BUU (Biological use, unclassified); THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(derivs., antisense; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Gene, animal
RL: BUU (Biological use, unclassified); THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(for galanin receptor GALR2; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Cell membrane
(from recombinant host; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Gene targeting
(gene knock-out; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Promoter (genetic element)
RL: BUU (Biological use, unclassified); THU (Therapeutic use); BIOL (Biological study); USES (Uses)
(inducible; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Translation, genetic
(inhibition, GALR2 mRNA antisense; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Phospholipids, biological studies
RL: BUU (Biological use, unclassified); BIOL (Biological study); USES (Uses)
(inositol-containing, hydrolysis, GALR2 receptor signaling; nucleic acids encoding mammalian galanin receptor GALR2, methods for identification of receptor agonists and antagonists, and therapeutic uses)

IT Genetic element
RL: BSU (Biological study, unclassified); PRP (Properties); BIOL (Biological study)

AB Biol. remediation of a sulfur-containing pollutant uses a hydrocarbon, especially an alkane, to stimulate the growth of hydrocarbon-metabolizing bacteria. The bacterial treatment can be used to develop anaerobic conditions, in which the hydrocarbon is oxidized and the sulfur pollutants are reduced; alternatively, an oxidant (air or O2) can be added to drive the treatment to aerobic conditions. The hydrocarbon-metabolizing bacteria can be selected from acidophilic, alkaliphilic, anaerobic, anoxygenic, autotrophic, chemolithotrophic, chemoorganotrophic, chemotrophic, halophilic, methanogenic, neutrophilic, phototrophic, saprophytic, thermoacidophilic, thermophilic bacteria, facultative aerobes, and/or microaerophilic anaerobes. Some species that are effective include Putida, Rubrisubalbicans, Aeruginosa, Paradoxus, Asteroides, Brasiliensis, Restricta, Globerula, Indologenes, Meningosepticum, Acidovorans, Delafieldii, Rhodochrous, Erythropolis, Fascians, Barkeri, etc. Types of sulfur-containing pollutants that can be remediated, especially in wastewater,

groundwater, and surface water, include sulfate, sulfite, sulfides disulfides, thiols, alkanesulfonic acids, dialkyl sulfides, thiosulfate, thiofurans, thiocyanates, thioureas, thioethers, dialkyl disulfides, sulfonic esters, SO2, sour fuel gases, and elemental sulfur.

AB A method for producing human dendritic cells for therapeutic purposes which allows culture-deriving dendritic cells using no cytokines, or reduced cytokines. The method involves culturing mononuclear cells from blood or bone marrow in a medium containing at least one agent such as a calcium ionophore, e.g. A23187, theophylline, prostaglandin E1, dibutyryl cAMP, Vitamin D3, Vitamin E, retinoic acid, or a fatty acid. The culture is maintained for a sufficient time, typically 4-14 days, to produce a culture enriched for dendritic cells, as evidenced by at least about 2.5% of total cells exhibiting dendritic cell processes, or a dendritic dell antigen such as CD80, CD86, or CD1a. Also provided is a method to produce antigen-specific human T-cells by pulsing the dendritic cells obtained by the method of the invention with an antigen such as a viral, tumor, bacterial, or cell surface antigen, and then co-culturing T-cells with the antigen-pulsed dendritic cells. The cells are useful for treatment of viral or bacterial infections, useful as a cancer vaccine, and useful to induce tolerance of allo- or xeno-grafts.

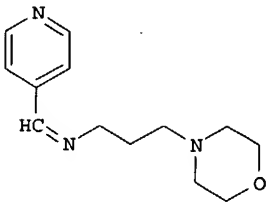
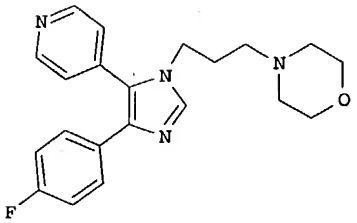
I



II



III

AB Novel 1,4,5-substituted imidazole compds. I and compns. for use in therapy as cytokine inhibitors are disclosed [wherein R1 = (un)substituted 4-pyridyl, pyrimidinyl, quinolyl, isoquinolinyl, quinazolin-4-yl, 1-imidazolyl, 1-benzimidazolyl; R2 = N3, heterocyclyl, heterocyclylalkyl, alk(en/yn)yl, aryl, aralkyl, wide variety of N-containing and O-containing groups; R4 = (un)substituted Ph, naphthyl, heteroaryl]. The subset of I [R1 = (un)substituted pyrimidinyl; R4 = (un)substituted Ph or naphthyl] is claimed. Examples include approx. 100 syntheses and several bioassays. For instance, cyclization of the isocyanide 4-FC6H4CH(N.tplbond.C)SC6H4Me-

4 with the imine II (prepns. given), in CH2Cl2 in the presence of the base 1,5,7-triazabicyclo[4.4.0]dec-5-ene (TBD), gave 51% title compound III. The latter compound was active in an in vitro test for inhibition of LPS-induced prostaglandin endoperoxide synthase-2 (PGHS-2) protein expression in human monocytes.

ST imidazole prepn cytokine inhibitor

IT Intestine, disease
(Crohn's, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Respiratory distress syndrome
(adult, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Antiarteriosclerotics
(antiatherosclerotics; preparation of imidazole derivs. as cytokine inhibitors)

IT Pancreas
(beta cells, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Malaria
(cerebral, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Lung, disease
Lung, disease
(chronic inflammation, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Eye, disease
(conjunctivitis, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Muscle, disease
(degeneration, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Kidney, disease
(glomerulonephritis, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Cytokines
RL: BSU (Biological study, unclassified); MSC (Miscellaneous); BIOL (Biological study)
(inhibitors; preparation of imidazole derivs. as cytokine inhibitors)

IT Heart, disease
Kidney, disease
(injury, reperfusion, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Brain, disease
(malaria, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Anti-inflammatory agents
Antiarthritics
Antiasthmatics
Anticoagulants
Antipyretics
Antirheumatic agents
Immunosuppressants
(preparation of imidazole derivs. as cytokine inhibitors)

IT Interleukin 1
Interleukin 6
Interleukin 8
Tumor necrosis factors
RL: BSU (Biological study, unclassified); MSC (Miscellaneous); BIOL (Biological study)
(preparation of imidazole derivs. as cytokine inhibitors)

IT Bone
(resorption, inhibitors; preparation of imidazole derivs. as cytokine inhibitors)

IT Lung, disease
(sarcoidosis, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Gram-negative **bacteria**
(sepsis, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Shock (circulatory collapse)
(septic, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Spinal column
(spondylitis, rheumatoid, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Brain, disease
(stroke, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Osteoporosis
(therapeutic agents; preparation of imidazole derivs. as cytokine

inhibitors)
IT Shock (circulatory collapse)
(toxic shock syndrome, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Diabetes mellitus
Eczema
Multiple sclerosis
Psoriasis
Sepsis
Silicosis
Sunburn
Transplant rejection
(treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Intestine, disease
(ulcerative colitis, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT 39391-18-9, Prostaglandin endoperoxide synthase

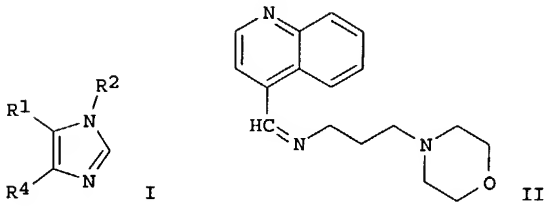
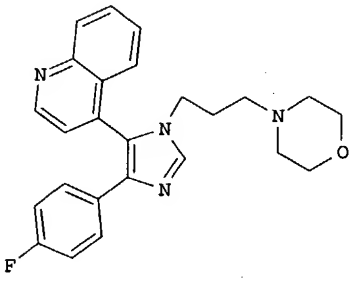
GI



I II



III

AB Novel 1,4,5-substituted imidazole compds. I and compns. for use in therapy as cytokine inhibitors are disclosed [wherein R1 = (un)substituted 4-pyridyl, pyrimidinyl, quinolyl, isoquinolinyl, quinazolin-4-yl, 1-imidazolyl, 1-benzimidazolyl; R2 = N3, heterocyclyl, heterocyclylalkyl, alk(en/yn)yl, aryl, aralkyl, wide variety of N-containing and O-containing groups; R4 = (un)substituted Ph, naphthyl, heteroaryl]. The subset of I [R1 = (un)substituted quinolyl or isoquinolinyl; R4 = (un)substituted Ph or naphthyl] is claimed. Examples include approx. 100 syntheses and several bioassays. For instance, cyclization of the isocyanide 4-FC6H4CH(N.tplbond.C)SC6H4Me-4 with the imine II (prepns. given), in CH2Cl2 in the presence of the base 1,5,7-triazabicyclo[4.4.0]dec-5-ene (TBD), gave 48% title compound III. Another compound I, namely the analog of III with R1 = 4-pyridyl, was active in an in vitro test for inhibition of LPS-induced prostaglandin endoperoxide synthase-2 (PGHS-2) protein expression in human monocytes.

ST imidazole prepn cytokine inhibitor

IT Intestine, disease
(Crohn's, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Respiratory distress syndrome
(adult, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Antiarteriosclerotics
(antiatherosclerotics; preparation of imidazole derivs. as cytokine inhibitors)

IT Pancreas
(beta cells, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Malaria
(cerebral, treatment; preparation of imidazole derivs. as cytokine inhibitors)

IT Lung, disease

Lung, disease
(chronic inflammation, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Eye, disease
(conjunctivitis, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Muscle, disease
(degeneration, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Kidney, disease
(glomerulonephritis, treatment; preparation of imidazole derivs. as cytokine inhibitors)
IT Cytokines
RL: BPR (Biological process); BSU (Biological study, unclassified); MSC (Miscellaneous); BIOL (Biological study); PROC (Process)

AB An aqueous solution for organ preservation or maintenance contains: a vasodilator in an amount sufficient to maintain vascular homeostasis; D-glucose and Mg2+ in amts. sufficient to support intracellular function and maintenance of cellular bioenergetics; macromols. of mol. weight >20,000 in an amount sufficient to maintain endothelial integrity and cellular viability; >100 mM K+; and a buffer in an amount sufficient to maintain the average pH of the organ preservation or maintenance solution during the period of organ preservation at or above physiol. pH. A suitable solution for heart preservation (Columbia University solution) contained D-glucose 67.4, MgSO4

5, K gluconate 95, adenosine 5, N-acetylcysteine 0.5, dibutyryl cAMP 2, KH2PO4 25 mM, heparin 10 U/mL, dextran 50 g/L, cefazolin 0.5, nitroglycerin 0.1 mg/mL, verapamil 10, BHA 50, and BHT 50 .mu.M. Restoration of the cAMP 2nd messenger pathway, and supplementation of the NO pathway with nitroglycerin, nitroprusside, or L-arginine, enhanced cardiac preservation for transplantation in a heterotopic rat model. The NO/cGMP pathway also had a critical role in successful lung preservation.

ST organ preservation vasodilator glucose magnesium

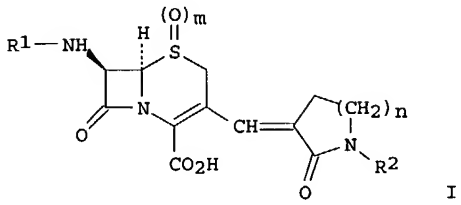
GI



I

AB The title compds. I [R1 is an acyl group derived from a carboxylic acid, hydrogen, or an amino protecting group; R2 is hydrogen, hydroxy, lower alkyl-Qp -, cycloalkyl, lower alkoxy, lower alkenyl, cycloalkenyl, lower alkynyl, aralkyl-Qp -, aryl-Qp -, aryloxy, aralkoxy or a heterocyclic ring, the lower alkyl, cycloalkyl, lower alkoxy, lower alkenyl, cycloalkenyl, lower alkynyl, aralkyl, aryl, aryloxy, aralkoxy and the heterocyclic ring being unsubstituted or substituted with at least one group selected from carboxy, amino, nitro, oxo, cycloalkyl, cyano, lower alkyl, lower alkoxy, hydroxy, halogen, -CONR4 R5, --N(R5)COOR9, R5 CO--, R5 OCO-- or R5 COO-- where R4 is hydrogen, lower alkyl, or cycloalkyl; R5 is hydrogen or lower alkyl; R9 is lower alkyl, lower alkenyl or a carboxylic acid protecting group; Q is --CO-- or --SO2 --; m is 0 or 1; n is 0, 1 or 2; p is 0 or 1] as well as their pharmaceutically acceptable salts and easily hydrolyzable esters are prepared Thus, [6R-[3(E),6.alpha.,7.beta.]]-3-[[(2-oxo-1-phenyl)-3-pyrrolidinylidene]methyl]-7-amino-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid trifluoroacetic acid salt was reacted with 2-(2-aminothiazol-4-yl)-(Z)-2-(methoxyimino)acetic acid 2-benzothiazolyl thioester in water-THF containing NaHCO3 at room temperature for 4 h to give 98% the title compound [6R-3(E),6.alpha.,7.beta.(Z)]-7-[[(2-amino-4-thiazolyl)(methoxyimino)acetyl]amino]-8-oxo-3-[(2-oxo-1-phenyl-3-pyrrolidinylidene)methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monosodium salt. The compds. are useful as oral or parenteral antibiotics against a broad spectrum of organisms. The minium inhibition concentration of I [R1 = 2-(2-amino-4-thiazolyl)-2-[(carboxymethoxy)imino]acetyl, R2 = CH2-CF3, n = 1, m = 0] disodium salt (also prepared) against Escherichia coli was 0.0625 mg/L.

AB An aqueous solution for organ preservation or maintenance is provided which includes a vasodilator in an amount sufficient to maintain vascular homeostasis; D-glucose in an amount sufficient to support intracellular function and maintenance of cellular bioenergetics; magnesium ions in an amount sufficient to support intracellular function and maintenance of cellular bioenergetics; macromols. of mol. weight greater than 20,000 daltons in an amount sufficient to maintain endothelial integrity and cellular viability; potassium ions in a concentration greater than about 110 mM; and a buffer in an amount sufficient to maintain the average pH of the organ preservation or maintenance solution during the period of organ preservation at about the physiol. pH value. Also provided is a method of preserving or maintaining an organ which includes contacting the organ with the solution Data from e.g. a heterotropic rat heart transplant model are included.

I

AB Title compds. I [R = (methylsulfinyl)- or methylsulfonylalkyl, (un)substituted thianyl, -thiolanyl, substituted thiazinyl, dithiolanyl, etc.; R1 = H, a group which forms an ester which is hydrolyzed in vivo] and their salts, useful as antibacterials (no data), were prepared Thus, (5R,6S)-6R-I [R = (1,1-dioxo-3-thiolanyl); R1 = 4-O2NC6H4CH2] underwent hydrogenolysis in the presence of Pd on diatomaceous earth to give (5R,6S)-6R-I [R = 1,1-dioxo-3-thiolanyl; R1 = Na].

ST penemcarboxylate alkylthio prepn antibacterial; antibacterial alkylthiopenemcarboxylate prepn; heterocyclylthiopenemcarboxylate prepn

I

II

AB Bactericidal thiadiazolyl(hydroxyimino)acetamidocephems I [R = H2N, protected H2N; R1 = H, acyl, sulfonyl, aryl, alkylaryl, alkyl, substituted alkyl, alkenyl, alkynyl, heterocyclyl; R2 = H, alkyl; R3 = H, acyloxyalkyl, pyridiniumalkyl, carbamoylpyridiniumalkyl, heterocyclylthioalkyl, alkyl, halo, HO; R4 = CO2H, protected CO2H] and dihydro derivs. of I were prepared Thus, 2-(4-chlorophenoxyimino)-2-(5-amino-1,2,4-thiadiazol-3-yl)acetic acid was treated with PCl5 in CH2Cl2 and then condensed with silylated 7-amino-3-(1,3,4-thiadiazol-2-yl)thiomethyl-3-cephem-4-carboxylic acid to give the cephem II. The min. inhibitory concentration of II against E. coli was 0.20 .mu.g/mL.

ST aminothiadiazolylhydroxyimino cephem bactericide; thiadiazolylhydroxyimino cephem bactericide

IT **Bactericides**, Disinfectants, and Antiseptics
((aminothiadiazolyl)(hydroxyimino)cephems)

IT 79-36-7
RL: RCT (Reactant); RACT (Reactant or reagent)
(acetylation by, of (hydroxyimino)acetic acid derivs.)

IT 37632-00-1
RL: RCT (Reactant); RACT (Reactant or reagent)
(acetylation by, of aminopropoxyimino cephem derivs.)

IT 76038-46-5
RL: RCT (Reactant); RACT (Reactant or reagent)
(acylation of, by aminocyclohexylacetyl chloride)

IT 76029-01-1
RL: RCT (Reactant); RACT (Reactant or reagent)
(addition reaction of, with aminopropoxyimino cephem derivative)

IT 58632-95-4
RL: RCT (Reactant); RACT (Reactant or reagent)
(condensation reaction of, with (aminopropyl)tetrazole derivs.)

IT 1828-09-7
RL: RCT (Reactant); RACT (Reactant or reagent)
(condensation reaction of, with (hydroxyimino)thiadiazolylacetic acid derivative)

IT 76028-95-0
RL: RCT (Reactant); RACT (Reactant or reagent)
(condensation reaction of, with aminocephem derivs.)

IT 4078-13-1
RL: RCT (Reactant); RACT (Reactant or reagent)
(condensation reaction of, with carbon disulfide)

IT 123-00-2 3529-08-6
RL: RCT (Reactant); RACT (Reactant or reagent)

(condensation reaction of, with carbon disulfide and Me iodide)

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB Bactericidal thiadiazolyl(hydroxyimino)acetamidocephems I [R = H2N, protected H2N; R1 = cycloalkyl, cycloalkenyl, (un)protected carboxyalkyl; R2 = pyridiniumalkyl, carbamoylpyridinioalkyl, thiadiazolylthioalkyl, tetrazolylthioalkyl; R3 = (un)protected CO2H] were prepared Thus, treating (aminothiadiazolyl)acetic acid II with PCl5 in CH2Cl2 and then with cephemylmethylpyridiniumcarboxylate III gave cephem IV, which had a min. inhibitory concentration of 1.56 .mu.g/mL against E. coli.

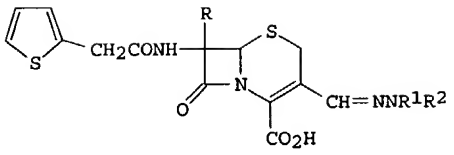
GI



I

AB Cephalosporin 3-hydrazonomethyl analogs I (R = H, OMe; R = H, alkyl; R1 = H, Ph, substituted-Ph, heteroaryl, acyl), useful as bactericides (no data), were prepared Thus, 3-formyl-7-[(2-thienyl)acetamido]-3-cephem-4-carboxylic acid hemiacetal lactone was treated with N2H4.HCl to give I (R = R1 = R2 = H).

ST cephalosorin hydrazonomethyl analog; hydrazonomethylcephalosporin analog prepn bactericide; cephemcarboxaldehyde hydrazone prepn bactericide

AB Compns. containing 2,2-dibromo-3-nitrilopropionamide (I) and 3,3,4,4-tetrachlorotetrahydrothiophene-1,1-dioxide (II) are synergistic bactericides, fungicides and slimicides. Thus a I-II mixture [**58339-15-4**] (1:1) at 100 ppm killed 99% of the microorganisms of a recirculating H2O sample from a paper mill in 3 hr, compared with 82 and 87% kill, resp., for like concns. of pentachlorophenol and Na dimethyldithiocarbamate after 3 hr.

GI For diagram(s), see printed CA Issue.
AB Prepns. are described for ethylene (Ia) and vinylene sulfates, especially Ia (R = Cl, R1 = R2 = R3 = H) (I), Ia (R = F, R1 = R2 = R3 = H) (II), 1,3,2-dioxathiole 2,2,-dioxide (III), and Ia (R = R2 = Br, R1 = R3 = H) (IV). Addnl. substitution in the 4- and 5-positions by halogen, Me, or Ph is claimed. Thus, 74.5 g. 1,3,2-dioxathiolane 2,2-dioxide (V) in 150 ml. CCl4 was heated to reflux. A 250 w. sunlamp was placed 2-4 in. from the reaction vessel as gaseous Cl was passed into the reaction mixture at 60 millimoles/hr. After 15 hrs. reaction time, there was obtained 68% I, b1.cntdot.8 81-3.degree., n25D 1.4505; 11% trans-Ia (R = R2 = Cl, R1 = R3 = H) (trans-VI), b0.cntdot.7 48-9.degree., m. 48-9.degree.; 4% Ia (R = R1 = Cl, R2 = R3 = H) (VII), b0.cntdot.& 40.degree., n25D 1.4502. After 22 hrs. there was obtained 65% I, 23% VI, and 9% VII; after 39 hrs., the product mixture was 24% I, 55% VI, 17% VII, and 3% Ia (R = R1 = R2 = Cl, R3 = H) (VIII). Similar chlorination of 37.2 g. V in 60 ml. CHCl3 gave the following: after 13 hrs., 90% I; after 31 hrs., 74% I, 19% VI; after 59 hrs., 61% I, 30% VI and 9% VII. Chlorination of 24.8 g. V in 60 ml. CCl4 at a rate of 120 millimoles/hr. Cl 20 hrs. gave 46% VI, 9% VII, 35% VIII, 10% cis-Vi; no I was observed. To prepare II, 23 g. HgF2 in 50 ml. CCl4 was cooled to 0-5%, and 7.92 g. I was added portionwise with stirring. The reaction mixture was stirred at 0-5% 1.5 hrs., then the CCl4 was decanted. The solid residue was washed with five 20-ml. portions of CCl4 and the CCl4 exts. were combined and worked up to give II, m. 48-50.degree.. Alternatively, 2.6 g. I was added portionwise at room temperature to a mixture of 3.2 g. AgBF4 in 50 ml. Et2O. The mixture was allowed to stand 2.5 days to give II, m. 49-50.degree.. To prepare III, 1.59 g. I and 1.66 g. AgOAc were mixed in 15 ml. anhydrous MeCN. There was an exotherm from room temperature to about 30.degree., after which the reaction mixture was refluxed 15 min. The reaction was repeated, except that tetrahydrofuran (THF) was used as the solvent with the same results. Alternatively, a solution of 24 g. VI in 250 ml. THF was added portionwise to a stirred suspension of 10 g. Mg in 10 ml. THF activated by 0.5 ml. ClCH2Ch2Cl. The rate of addition was adjusted to bring the reaction mixture to reflux, and the mixture was refluxed for an addnl. 2 hrs. Filtration and solvent removal gave III, m. 51.5-2.5.degree.. To prepare IV, about 5-8 drops Br were added with stirring to 0.4 g. III at room temperature The reaction mixture was stirred overnight at room temperature An addnl. 1.5 g. Br was added and the reaction mixture was stirred at room temperature for another 48 hrs. Isolation and recrystn. gave IV, m. 69-70.5.degree.. I-IV are agents which control growth of bacteria, fungi and other microorganisms.

AB Many species of bacteria and fungi are controlled by 5-625 ppm. compns. of 3-acetoxymercuri-2-(methoxypropyl) 3-sulfolanyl ether (I) and 3-(acetoxymercuri)-2-methoxysulfolane. These compds. have very low toxicities to mammals; oral doses of 300 mg./kg. did not harm rats. They are recommended for protection of crops against pathogens.

AB The title compds. I, where R = (CH2)n or a divalent group are prepared from cyclic ketones, trifluoroacetyl derivs. and appropriate 2-thiopseudouronium mineral acid salts. I may be oxidized by peracetic acid to the sulfonyl derivs. II. Thus, to a suspension of MeONa 18 in Et2O 350, F3CCO2Et 36 parts is added with vigorous agitation during 20 min. A solution of cyclopentanone 25 in Et2O 150 parts is introduced. The mixture is refluxed 2 hrs., allowed to stand at room temperature overnight, HOAc 21 in H2O 100 is added, then Mg(OAc)2 37 in H2O 25 parts. Et2O is removed by distillation and the residue worked up to yield 2-trifluoroacetylcyclopentanone (III), b. 27.degree./2 mm. A mixture of III 3 and 2-methyl-2-thiopseudouronium sulfate 3 in EtOH 80 is refluxed 18 hrs., the EtOH removed by vacuum distillation and the residue poured into H2O 200 parts. The mixture is extracted with pentane and the 4-trifluoromethyl-6,7-dihydro-2-methylthio-5H-cyclopenta[d]pyrimidine (IV), which crystallizes upon cooling to dry ice temperature, is filtered off and dried in air; m. 61-3.degree.. To a solution of IV 1 in HOAc 10, is added 40% peracetic acid 2 parts at 60.degree.. The mixture is poured into cold H2O 200 to give 4-trifluoromethyl-6,7-dihydro-2-methylsulfonyl-5H-cyclopenta[d]pyrimidine, m. 118-19.degree. (EtOH-AcOEt). Other products reported are 2-trifluoroacetylcyclohexanone, 4-trifluoromethyl-5,6,7,8-tetrahydro-2-methylthioquinazoline, 2-trifluoroacetylcycloheptanone, 4-trifluoromethyl-6,7,8,9-tetrahydro-2-methyl-5H-cyclohepta[d]pyrimidine, 4-trifluoromethyl-6,7,8,9-tetrahydro-2-methylthio-5H-cyclohepta[d]pyrimidine, m. 86.degree., trifluoroacetylcyclooctanone, 4-trifluoromethyl .cntdot.5,6,7,8,9,10-hexahydro-2-methylthiocycloocta[d]pyrimidine, 4-trifluoromethyl-5,6,7,8,9,10-hexahydro-2-methylsulfonylcycloocta[d]pyrimidine, m. 86.degree., 2-trifluoroacetylcindanone, 4-trifluoromethyl-6,7,8,9-tetrahydro-2-methylthio-5H-indano[1,2-d]pyrimidine, m. 86.degree., 2-trifluoroacetyl-3,4-dihydro-1(2H)-naphthalenone, m. 49.degree., 4-trifluoromethyl-5,6-dihydro-2-methylthiobenzo[h]quinazoline, m. 144.degree., 4-trifluoromethyl-5,6-dihydro-2-methyl-sulfonylbenzo[h]quinazoline, m. 223-4.degree., 2-trifluoroacetyltetrahydro-1,4-thiopyrone, 2-benzylthio-4-trifluoromethyl-7,8-dihydro-5H-thiopyrano[4,3-d]pyrimidine, and 2-benzylsulfonyl-4-trifluoromethyl-7,8-dihydro-5H-thiopyrano[4,3-d]pyrimidine, m. 148-50.degree.. The title compds. (I) are useful as antibiotics, bactericides, and fungicides.

AB The title compds. (I and II) are antibacterials and antiparasitics and reduce serum cholesterol levels. They are prepared by reaction of N-substituted dichloromaleimides (III and IV) with tertiary amines. Dichloromaleic anhydride (9.0 g.) in 15 ml. AcOH and 5.2 g. H2NCH2CO2Et were kept 1 hr. at 100.degree., cooled, and 15 ml. H2O was added to give 4.6 g. III (R = CH2CO2Et), m. 73-4.degree.. The following III were similarly prepared (R and m.p. given): H, 180.degree.; CH2CH:CH2, 62.degree.; Bu, 38.degree.; iso-pentyl, 57-8.degree.; lauryl, 61.degree.; lauryloxypropyl, 46.degree.; CH2CH2OH, 58-9.degree.; cyclohexyl, 143-4.degree.; PhCH2, 112-13.degree.; CHPh2, 115-16.degree.; CH2CH2Ph,

134.degree.; CHMeCH2Ph, 84.degree.; 2-furyl, 66.degree.; Ph, 208-10.degree.; 2-ClC6H4, 132.degree.; 3-ClC6H4, 183.degree.; 4-ClC6H4 (V), 210-16.degree.; 4-IC6H4, 251-4.degree.; 4-MeOC6H4, 209-10.degree.; 2-CF3C6H4, 152.degree.; 1-naphthyl, 204.degree.; 3-sulfolanyl, 250.degree.. The following IV were also prepared (Y and m.p. given): CH2CH2, 296-9.degree.; (CH2)6, 193.degree.; 1,3-xylylene, 127-9.degree.. A suspension of 2.77 g. V in 20 ml. MeOH was treated with 5.1 g. Me2NBu, refluxed 18 hrs., and poured into 20 ml. H2O to give 2.3 g. I (R = 4-ClC6H4, Z = Me2NBu), m. 205-7.degree.. The following I were similarly prepared (R, Z, and m.p. given): 4-IC6H4, PhCH2NMe2, 180.degree.; lauryl, imidazole, 245.degree.; PhCH2CH2, imidazole, 268-70.degree.; 3-ClC6H4, imidazole, >300.degree.; H, pyridine, >300.degree.; lauryloxypropyl, pyridine, 101.degree.; PhCH2, pyridine, 208-9.degree.; PhCH2CH2, pyridine, 170-1.degree.; 2-ClC6H4, 4-picoline, 293-4.degree.; 4-IC6H4, 4-picoline, >300.degree.; CH2CH2OH, 4-pentylpyridine, 152.degree.; lauryloxypropyl, 4-pentylpyridine, 116-18.degree.; 3-sulfolanyl, 4-pentylpyridine, 192-3.degree.; lauryl, 4-benzyl-pyridine, 165.degree.; cyclohexyl, 4-benzylpyridine, 275-6.degree.; 4-MeOC6H4, 4-benzylpyridine, 227.degree.; PhCH2CH2, 3-hydroxypyridine, 296-8.degree.; 2-furfuryl, 3-hydroxypyridine, >300.degree.; 3-sulfolanyl, 3-hydroxypyridine, >300.degree.; 4-IC6H4, 3-acetylpyridine, 255-8.degree.; 4-MeOC6H4, 3-acetylpyridine, 224.degree.; PhCH2CH2, 3-formylpyridine, 103-4.degree.; PhCH2CH2, 4-formylpyridine, 232-3.degree.; PhCH2CH2, isonicotinic acid, 268.degree.; 4-ClC6H4, Et nicotinate, 213-14.degree.; furyl, Et nicotinate, 193.degree.; isopentyl, Me isonicotinate, 237-8.degree.; Bu, nicotinamide, 274-5.degree.; lauryloxypropyl, nicotinamide, 253-5.degree.; PhCH2CH2, nicotinamide, 284-5.degree.; 2-F3CC6H4; nicotinamide, >300.degree.; allyl, N,N-diethylnicotinamide (VI), 177-8.degree.; CH2CO2Et, VI, 139.degree.; CHPh2, VI, 235-6.degree.; 2-F3CC6H4, VI, 189-90.degree.; 4-MeOC6H4, VI, 210.degree.; PhCH2CH2, isonicotinic acid hydrazide, 185-95.degree.; PhCH2CH2, 4-pyridine aldoxime, 263.degree.; lauryl, 3-aminopyridine, 162-5.degree.; PhCH2CH2, 3-aminopyridine, 223-9.degree.; PhCH2CHMe, 3-aminopyridine, 200.degree.; isopentyl, 4-aminopyridine, 265.degree.; PhCH2CH2, pyrazine, >300.degree.; PhCH2CH2, 2-methylpyrazine, 195-6.degree.; PhCH2CH2, pyridazine, 189-90.degree.; allyl, isoquinoline, 185.degree.; CHPh2, isoquinoline, >300.degree.; lauryl, N-methylmorpholine, 173.degree.; PhCH2CH2, N-methylmorpholine, 169-70.degree.; 3-ClC6H4, N-methylmorpholine, 210-11.degree.. AB I possess high biol. activity as insecticides, fungicides, herbicides, and bactericides. These compds. are prepared by treating a polyhalotetrahydrothiophene 1,1-dioxide or a polyhalodihydrothiophene 1,1-dioxide, with an alkaline solution Thus, to 258 g. (1 mole)

3,3,4,4-tetrachlorotetrahydrothiophene 1,1-dioxide dissolved in 2 l. MeOH was added 150 g. aqueous NH3 (28%) at 30-5.degree.. H2O (1 l.) was added and MeOH distilled at 40.degree./20-5 mm. The precipitate was filtered off, washed, recrystd., and dried in vacuo to give I (R = H, R1 = R2 = Cl), m. 112-13.degree., H2O solubility >5%. Similarly were prepared I (R = R2 = Cl, R1 = H) and I(R = R1 = R2 = Cl), .lambda. 238 and 312 m.mu..

AB Preparation of 4,5,6,7,10,10 - hexachloro - 4,7 - methylene - 4,7,8,9 - tetrahydrophthalan (I) 1-ethers, thioethers, and esters and their efficiencies for use as insecticides, bactericides, and fungicides are described. I (34.4 g.) in 200 ml. CCl4 heated to boiling, 1.7 g. Br-H2O added (ultraviolet light) within 1 hr., CCl4 distilled in vacuo and the residue recrystd. from petr. ether gave 39.8 g. I 1-Br derivative (II), m. 75.degree.. Under similar conditions, II was prepared from I, N-bromosuccinimide, and Bz2O2 in CCl4. II (4.2 g.) refluxed 8 hrs. with 16 g. MeOH, concentrated to half-volume, and cooled to -10.degree. yielded I 1-methoxy derivative, m. 95.degree.. II refluxed with the corresponding alcs. and anhydrides yielded these derivs. of I: 1-ethoxy, m. 97.degree.; 1-propoxy, n20D 1.5345; 1-butoxy, n20D 1.5295; 1-acetoxy, m. 129.degree.. Addnl. derivs. of I were prepared (% yield given) by heating the corresponding compds. with II 8 hrs. on a H2O bath and distilling in vacuo: 1-(.beta.-chloroethoxy), 98, b0.08 135-45.degree., n20D 1.5490; 1-(.gamma.-chloro-.beta.-ethylpropoxy), 52, b1.0 215-25.degree., n20D 1.5340; 1-allyloxy, 94, b0.009 115-20.degree., n20D 1.5431; 1-phenoxy, 70, b0.009 170-80.degree.; 1-(p-chlorophenoxy), 25, b0.01 180-90.degree.. The following derivs. of I were prepared by heating II and the corresponding mercaptans in a sealed glass tube for 8 hrs. at 100.degree.: 1-ethylthio, 87%, b0.02 110-20.degree., n20D 1.5668 and 1-phenylthio, 70%.
